Machine Learning

Congratulations! You have completed all three courses of the Machine Learning Specialization. In this program, you studied modern machine learning concepts, including supervised learning (multiple linear regression, logistic regression, neural networks (deep learning), and decision trees) and unsupervised learning (clustering, dimensionality reduction, recommender systems). You learned some of the best practices used in Silicon Valley for AI innovation (evaluating and tuning models, taking a data-centric approach to improving performance, and more.)You have mastered key AI concepts and gained the practical know-how to quickly and powerfully apply machine learning techniques to challenging real-world problems. Now #BreakIntoAI and start building your career in machine learning!

Andrew Ng, Instructor, DeepLearning.AI
Eddy Shyu, Curriculum Architect, DeepLearning.AI
Aarti Bagul and Geoff Ladwig, Curriculum Engineers, DeepLearning.AI
